

POULTRY PROCESSING

Poultry processing plants are fast paced, food manufacturing facilities which require their conveyors to keep up with their intense needs. Digilube's Bolted and Logging Chain Lubricators are designed to properly lubricate in this high intensity atmosphere.

Alongside these lubricators, we recommend using Digilube's Ultra-Film FG. This food grade lubricant is NSF certified; approved to be used in food processing environments where there is the possibility of incidental food contact.

Ultra-Film FG is produced using high pressure hydro-treatment, with a high degree of purity and stabilization with a food grade inhibitor and an additive system designed for lubrication of food processing equipment.

This lubricant has been specially formulated to make sure it doesn't interfere with the sanitizing process and will not leave any residue on the chains after sanitation.
